

The commitment to international standard for Water stewardship

By implementing AWS, the international standard for water stewardship, we aim to achieve five key outcomes for our production sites and their surrounding areas. We commit to allocating necessary resources, developing plans, managing progress, and communicating sincerely with stakeholders.

Five Desired Outcomes

1. Good Water Governance
2. Sustainable Water Balance
3. Good Water Quality Status
4. Healthy Condition of Important Water-Related Areas
5. Safe Water, Sanitation and Hygiene (WASH) for all Employees Working at our Bottling Plants

We establish the necessary organizational structure to manage and plan water resources and effectively operate AWS standards. By reporting on the progress of these plans, we will disclose important water management information to approved site stakeholders in an open and transparent manner. In collaboration with public institutions, we will support sustainable water-related plans and policies for water basins.

AWS is a global membership collaboration comprising businesses, NGOs and the public sector. Its members contribute to the sustainability of local water-resources through their adoption and promotion of a universal framework for the sustainable use of water — the International Water Stewardship Standard, or AWS Standard — that drives, recognizes and rewards good water stewardship performance.
