

Daisen Plant of Coca-Cola Bottlers Japan Inc.
Commitment to Responsible Water Stewardship

Coca-Cola Bottlers Japan Inc. implements water resource management with reference to the internationally recognized AWS Standard for responsible water stewardship. Within our production sites and their defined boundaries, we are committed to allocating the necessary resources, developing plans, managing progress, and appropriately disclosing information to stakeholders to achieve five desired outcomes:

1. Good Water Governance
2. Sustainable Water Balance
3. Good Water Quality Status
4. Healthy Freshwater Ecosystems and Their Biodiversity
5. Safe Water, Sanitation, and Hygiene (WASH) for Employees at our Production Sites

Through water resource management and planning, we establish the necessary organizational structures to effectively promote water stewardship with reference to the AWS Standard. We engage with stakeholders in an open and transparent manner, report on the progress of implementation plans, and disclose important information related to water resource management. In addition, working with public institutions, we support sustainable water-related plans and policies for watersheds.

AWS (Alliance for Water Stewardship): AWS is a global membership organization composed of businesses, NGOs, and public institutions. Its members contribute to the sustainability of local water resources through adopting and promoting a universal framework for the sustainable use of water that drives, recognizes, and rewards good water stewardship performance.
