Gender

Age/Generation Disabilities

I GRTQ

### Progress against CSV Goals

Since we already achieved our 2025 goal of 6% female managers in 2021, we have set a new goal of 20% by 2030. We are promoting initiatives to provide a workplace environment and support systems to foster a CCBJH organizational culture where every employee can independently build a career where they can shine.

### Diversity and inclusion initiatives

The CCBJH Group has made the promotion of diversity and inclusion (D&I) as one of its key management priorities. We are building a diverse workplace that meets the various needs of our business environment, reflects our shoppers and consumers, and supports the Group's sustainable growth. At the same time, we want to create a workplace

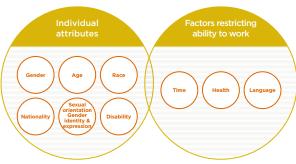

where each and every one of our employees, who come from a wide range of backgrounds, can demonstrate their abilities without losing their desire to improve.

We also promote diversity at the management level by welcoming differences in background such as nationality, gender, age, and experience in the Board of Directors and by considering and making decisions on issues from various perspectives.

### Medium- to Long-term Vision for Diversity and Inclusion

By respecting the diversity of our workforce, we will provide opportunities to enable all employees to leverage their full potential, regardless of gender, age, disability, race, nationality, sexual orientation, and other attributes, such as gender identity and expression, and unaffected by factors that could restrict their ability to work.

Providing opportunities for all employees to leverage their full potential, regardless of individual attributes and unaffected by factors that could restrict their ability to work.

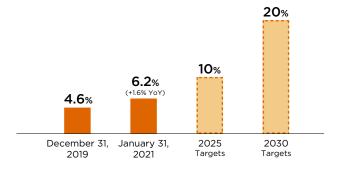

### Initiatives to encourage women's success in the workplace

#### Updated target ratio for female managers to 20%

The CCBJH Group is promoting the active participation of women out of respect for the individuality of each one of its employees, and in order to continue to generate innovation by incorporating diverse values and ideas. Within the CCBJH Group, there are many female employees who give up returning to work or miss out on career advancement opportunities due to reasons such as taking maternity or childcare leave and family-related time constraints, which are unrelated to motivation or work ability. CCBJH Group is creating an environment in which all employees, regardless of gender, are able to maintain a balance between work and family care, and to foster an organizational culture that supports employees' individual career development needs.

In order to increase the ratio of female managers, we are promoting a workplace culture and support system to help increase the number of female employees who

#### Target ratios for female managers

proactively choose to drive results and advance their careers. In January 2021, we achieved our initial target of 6% female managers by 2025 ahead of schedule. We have set new targets of 10% female managers in 2025 and 20% in 2030.

#### Realization of flexible work styles

To achieve a balance between work and family care, it is essential to adopt flexible work styles that are not restricted to a specific time or place. In 2020, we introduced a super flextime system with no core working hours, expanded satellite offices, and implemented a direct-to-market/direct-to-home commuting system in the Commercial function. In addition to promoting the idea of taking childcare leave to male employees and strengthening the development of next-generation leaders, we are also working to further promote D&I by implementing targeted training programs. These programs include a Mentor Program for female managers, the "Female Next Leaders Program"—aimed at fostering next-generation leaders—as well as seminars for returning to work after taking leave for childcare.

We also share comments from our female employees on our website

Roundtable discussion for female employees on work styles (Japanese only)

## Aiming to step up as a leader

### Natsuko Wakabayashi

Capability Development Manager Capability Development Division

It is said that many women do not want to be in managerial positions, and at one time, I did not want to either. I had declined to take the management exam because the thought of so much responsibility made me hesitate. Even so, my manager at that time recommended that I take it, and I am grateful for that advice now. I have learned many things from moving up a level. As a manager, I decide the direction we need to take and use my creativity and imagination on a daily basis to increase my team's happiness and, in turn, enable greater productivity. I believe that persevering through trial and error and continuing to learn with my fellow team members will lead to my own growth and the improvement of the company's business performance.

Photography: The Dream Collective

### Programs to nurture next-generation leaders

CCBJI established Coca-Cola University Japan (CCUJ), its comprehensive program to nurture next-generation leaders, to develop employees who will drive the transformation and future growth of the Coca-Cola system in Japan. Through collaboration with The Coca-Cola Company, CCUJ will also serve as a foundation to organize global leadership training courses and overseas study programs aimed at developing competent and capable employees who will share their enriched knowledge extensively with Coca-Cola bottling partners around the world.

In addition, the Global English Transformation (GET) English language proficiency program not only allows employees to gain knowledge from overseas, but it also supports their English-speaking ability to support their advancement in the company. We are aiming to develop employees who can play an active role globally by linking these efforts to the revitalization and growth of the entire organization.

### Highlighting para-athlete activities

To create opportunities for students and others to think about leadership in a diverse society, CCBJI and Japan University of Economics asked CCBJI athlete-employee Haruki Masanari to give a special lecture entitled "Leadership Theory" in December 2020. On the day of the event, the lecture was given both face-to-face and online, and, based on the turning points in Masanari's own life (before and after the discovery of his disability), many different forms of leadership were discussed as well as his various experiences as a para-athlete. Masanari explained to the students the importance of thinking about their roles within a team, staying committed to the task at hand and continuing to take on challenges in every aspect of life. In the years to come, we will continue to collaborate with all our partners and focus on creating a society where diversity is respected.

CCBJH Group Employment of people with disabilities: 2.45% As of June 1, 2020: -0.14% (YoY)

- As reported in the "Employment Report for Persons with Disabilities" submitted to the Director of Public Employment Security Office.
- 2. 2020 data is the total from the special provision subsidiaries, CCBJI and the CCBJB.
- 3. 2019 data reflects CCBJI

## Success in the workplace for people with disabilities

#### Miki Nagashima

Business Support Promotion Leader Business Support Department, Coca-Cola Bottlers Japan Benefit Inc.

Coca-Cola Bottlers Japan Benefit (CCBJB) Inc. received certification as a special provision subsidiary of the CCBJH Group in September 2019 and is focused on the creation of an improved system to promote the employment of people with disabilities. While gradually gaining recognition and the trust of other departments, we are actively expanding the scope of our work, while facing up to the challenges of more demanding office support duties. In 2020, ten new colleagues with a variety of skills joined and are currently working at the company. In the years to come, I would like to contribute to the CCBJH Group as it creates workplaces where each person is happy and feels rewarded, and also supports their retention and training.

Revised company regulations to provide equal opportunities for members of the LGBTQ community

As an initiative to promote diversity and inclusion (D&I), the CCBJH Group amended the definition of "spouse" in the company regulations (Employment Regulations, etc.) in January 2020 to provide equal opportunities for employees with diverse lifestyles, including LGBTQ employees. This allows all employees to take advantage of welfare benefits, such as childcare leave and family care leave, regardless of the gender of their partners or their marital status. We also amended our Human Rights Policy and D&I Policy to include gender identity and expression in addition to sexual orientation. Furthermore, we provide e-learning programs for all employees in an effort to expand people's awareness throughout the organization.

In December 2020, we announced our endorsement of Business for Marriage Equality (BME), a campaign calling for companies to support

for companies to support marriage equality. BME works to raise the visibility of companies that support the legalization of same-sex marriage (marriage equality) in Japan.

**Business for Marriage Equality** 

In addition, our LGBTQ-related initiatives received the highest gold ranking in our first application to be recognized in the PRIDE INDEX 2019 program, which is an assessment by the "work with Pride" (wwP) organization.

### Conducting training sessions on unconscious bias for managers

We conducted training on unconscious bias for 1,263 managers and e-learning content to advance awareness of LGBTQ issues for approximately 16,000 employees. In the onboarding training given to new graduates and mid-career hires, we include programs designed to promote understanding of LGBTQ issues. Based on our medium- to long-term D&I vision, we are aiming to create change and innovation, lead to value creation, and enhance our competitiveness.

#### What is "work with Pride"?

The organization provides information to promote the creation of workplaces within Japanese companies where members of the LGBTQ community can work while being true to themselves. Once a year, wwP holds a "work with Pride" conference on LGBTQ issues—primarily targeting those responsible for personnel, human rights, and diversity in companies and organizations—to provide an opportunity for each company to actively engage.

#### What is unconscious bias?

Unconscious bias is a prejudice that a person is unaware of. It refers to the predisposed views that each person unknowingly has in his or her daily life.

#### Creating comfortable workplaces with diverse values

Driven by its senior management, the CCBJH Group is promptly and flexibly promoting the creation of workplaces in which diverse employees can do their job comfortably. These efforts have been highly rated and have been evaluated in various external assessments of the working environment at the CCBJH Group.

**2020** CONSTITUENT MSCI日本株 女性活躍指数 (WIN)

### **Platform**

### **Communities**

- Continuing our legacy of partnering with communities where we live and work to support diverse needs and ambitions.
- Harnessing the potential of communities and driving action on our core platforms

- Drive impact through two national platforms (Inclusion and Resources)
- Initiatives that are sustainable and additionally have local relevance

### Progress against CSV Goals

Our efforts in partnering with communities have achieved various milestones such as completion of the Hiroshima Plant tour facility, receiving the Prime Minister's Award for the greening of our Ebino Plant, and our women's field hockey team winning three championships in Japan. Furthermore, to explore new ways of communicating with our communities we held Virtual Plant Tours and online

### **Energizing communities** through sports

The CCBJH Group manages the Coca-Cola Red Sparks men's rugby team and the Coca-Cola Red Sparks women's field hockey team. Both teams not only deliver game-day thrills to a large number of local fans, but also proactively participate in local events as part of building vibrant communities.

A member of the Japan Rugby Top Challenge League, the Coca-Cola Red Sparks team is based in the city of Fukuoka. In 2020, while many games and events were cancelled due to the impact of the COVID-19 pandemic, we undertook new initiatives, such as releasing videos created by the players and coaches with exercises that people could do at home to help them stay healthy and compensate for the lack of exercise associated with staying at home.

The Coca-Cola Red Sparks women's field hockey team is based in Hiroshima and is a member of the Hockey Japan League (HJL). Amid the restrictions placed on practices and games, the women's field hockey team won three major domestic championship titles\* for the first time since the team was formed. The team has received numerous awards from local governments and regions for its achievements, including both the Hiroshima Prefecture Governor's Physical Education and Sports Award, and the Hiroshima Citizens Award (2020).

\*42nd All-Japan Women's Hockey Company League, the HJL Takamadomiya Memorial Cup for 2020, and the 81st All-Japan Women's Hockey Championship

Online exercise videos for people staying at home

Note: Rugby team to terminate its activities at the end of 2021. We would like to express our heartfelt gratitude to all of you who have given us your support.

Main communities initiatives https://en.ccbji.co.jp/csv/community/

### New Hiroshima Plant: Center for communication with the community is now complete

In October 2020, a tour facility was completed inside the new Hiroshima Plant (Mihara City, Hiroshima Prefecture). In addition to enabling visitors to see manufacturing processes, the Hiroshima Plant tours provide innovative and immersive content to experience our manufacturing processes. Visitors are also able to enjoy enhanced displays that showcase the history and brands of Coca-Cola, as well as videos and photos showing the path of reconstruction

from the flood damage sustained by the former CCBJI Hongo Plant to the new top-class Hiroshima Plant.

The CCBJH Group's plant tours are a method of direct communication with stakeholders, especially consumers and business partners. Since the end of February 2020, the plant tours have been suspended to prevent the spread of COVID-19 (as of May 2021), but we have made content available via our website that allows visitors to experience a Virtual Plant Tour, and we will continue to focus on communicating with our communities in new and innovative ways.

### >> ELEMENTS OF THE HIROSHIMA PLANT TOUR

A theater room that visitors can reach by entering a one-of-a-kind huge PET bottle

A "museum zone" that showcases the history of Coca-Cola, its major brands, and much more.

Visitors can observe the process by which Coca-Cola is manufactured through viewing platforms and a special, exciting experience that awaits visitors.

In this second theater room, visitors have a chance to learn about logistics operations, the history of vending machines, and much more.

Here, visitors can taste product samples, take memorable shots at clever photo spots and even purchase souvenir merchandise.

## A city striving to provide maximum support for regional revitalization

### Yoshihiro Okada

Mayor, Mihara City, Hiroshima Prefecture

Playing a key role in supplying the Chugoku and Shikoku areas of Japan, the newly established Hiroshima Plant is an important facility which has installed automated production lines and the latest IoT technologies, and I hear there is a possibility of further plant expansion. An attractive plant tour has also been added, and, in combination with sightseeing locations and commercial facilities near the local airport, I feel this has the high potential to draw in new groups of tourists by being a stop on an area tour or as part of an industrial tour. I am confident the facility will be able to make major contributions through employment and other means to the revitalization of the local economy in this city and in Hiroshima Prefecture in the years to come. I will strive to provide maximum cooperation and support to the business development of the Hiroshima Plant.

Shinichi Masui Plant Manager, Hiroshima Plant

In 2018, the CCBJI Hongo Plant was damaged by the torrential rains in western Japan, and the new Hiroshima Plant commenced operations only one year and 11 months later. The team members of the former Hongo Plant and the management team were united in their commitment to staying in the local area, so the Hiroshima Plant is located just 4 kilometers from the former plant site. Utilizing the best-in-class functions of this plant, we will endeavor to contribute to the development of Mihara City, not only by providing a stable supply of products, but also by making the plant function as a venue for communication with the community.

### Ebino Plant receives Prime Minister's Award in 2020 for promoting the greening of business sites

The CCBJI Ebino Plant (Ebino City, Miyazaki Prefecture) received the Prime Minister's Award in 2020, which is granted to individuals and organizations who have demonstrated outstanding contributions in promoting the greening of business sites.

An important production and logistics base in the southern Kyushu area, the Ebino Plant is a park-based facility in harmony with the rich, natural environment. The plant and its grounds attract as many as 150,000 visitors annually, including 70,000 visitors for our plant tours. In the plant's water source area, we have concluded agreements

with Ebino City and local forestry associations to carry out forest conservation activities and promote the protection of water

resources. This award is normally presented at the Ceremony of awarding the MIDORI Prize (hosted by the Cabinet Office), which is held in April each year. However, the ceremony was cancelled to prevent the spread of COVID-19, and an award presentation ceremony was held at the Miyazaki prefectural government's office in November 2020.

### Anticipating further advancements from Ebino's valued partner CCBJI

Takaaki Muraoka Mayor, Ebino City Mivazaki Prefecture

Upon your receipt of the Prime Minister's Award. I would like to offer my congratulations to those who have been promoting the greening of the Ebino Plant. I am very pleased to see results from the greening efforts in the city so soon. I am also grateful that this plant was established in harmony with Ebino's abundant nature, and that the plant's location has become a place of relaxation for the community.

In Ebino City, an increasing number of companies are, like CCBJI, engaged in promoting the greening of business sites. I have a sincere hope that there will be further advancements from CCBJI, as a leading company, and as a reliable and valued partner that will drive this city's development.

### A collaborative program to address community challenges

In Miyagi, Fukushima, Mie, and Miyazaki prefectures, the CCBJH Group is supporting initiatives designed to help solve regional issues. Based on collaboration between industry, government, academia, and nonprofit organizations-for example, regional administrations, educational institutions, and municipal organizations—the initiatives are conducted through a variety of projects, such as youth-led workshops, activity presentations, and awards systems.

The event "Connecting us with society through happiness: SDGs Workshop Mie Mirai" was held beginning in 2018 as a collaboration among Mie Prefecture, Dr. Masao Aoki's research lab (Faculty of Humanities, Law and Economics, Mie University), the nonprofit organization M Bridge, and CCBJI. In this event, participants sought ideas to increase Mie Prefecture's attractiveness and solve its problems through dialogue, and envisioning a happy future. We will continue to provide opportunities for interaction and creativity so that local communities can take the initiative in solving problems in local communities.

#### Main activities

SDGs Workshop Mie Mirai (Mie Prefecture)

Challenge Internship (Fukushima Prefecture)

### Sendai Youth Award ceremony

(Miyagi Prefecture)

### Scholarship aid

The CCBJH Group supports a scholarship program sponsored by The Coca-Cola Educational & Environmental Foundation. The aim of this initiative is to promote sustainability and the Sustainable Development Goals (SDGs) by awarding scholarships to university and graduate school students.

### Partnering with local governments to address regional issues

The CCBJH Group supports emergency product supply agreements and tourism promotion agreements with local

governments and organizations within its sales areas in order to strengthen collaboration with these important partners and stakeholders. The Group is also continuing to install regional support vending machines within its sales areas to create value in the region through its core beverage business.

#### **Emergency agreements**

We have concluded emergency agreements in preparation for large-scale disasters across our sales areas. These agreements are to ensure that people impacted by an emergency can rapidly access drinking water, so we will prioritize water supply to emergency shelters and provide residents with beverages free of charge from vending machines. As of the end of 2020, we had agreements with 1,059 local governments and organizations.

Disaster agreements with local governments and organizations 1,059

### Tourism promotion agreements

We have concluded tourism promotion agreements with local governments such as in Chiba, Kanagawa, Saitama, and Kyoto prefectures, for the purposes of promoting tourism in the region. Based on these agreements, we are developing Coca-Cola bottles with unique designs in each region and carrying out initiatives that include donating a portion of the sales proceeds.

#### Community support vending machines

We are promoting the installation of community support vending machines with unique illustrations at sightseeing locations and tourist attractions within sales areas. A portion of the sales proceeds of The Coca-Cola Company's products from these support vending machines is donated to local governments and NPOs in those areas and is used to fund activities like regional revitalization and community development.

**∞**|€

In collaboration with official worldwide Olympic and Paralympic sponsor, The Coca-Cola Company, CCBJI, as a Coca-Cola bottling company serving the host city, is undertaking various community initiatives toward local revitalization including efforts to build momentum toward the upcoming Olympic and Paralympic Games Tokyo 2020, delayed due to the COVID-19 pandemic.

### Vending machines to build momentum for the Olympics and support athletes

In cooperation with the Coca-Cola (Japan) Company, which is the Presenting Partner of the Tokyo 2020 Olympic Torch Relay, we developed the "Coca-Cola Olympic Torch Relay Memorial Vending Machine" exclusively for local areas through which the torch relay passes, to support the fostering of regional momentum toward the Olympic and Paralympic Games and regional revitalization initiatives. We are also developing the "JOC Olympic Support Vending Machine" and the "JPC Paralympic Support Vending Machine" to support top athletes aiming to participate in the Olympic and Paralympic Games.

Coca-Cola Olympic Torch Relay Memorial Vending Machine

### Partnerships with local governments inspired by the Olympic and Paralympic Games Tokyo 2020

With the start of the Olympic and Paralympic Games Tokyo 2020, CCBJI will work closely with local governments as a partner in the region, as well as invigorate local communities, promote education, and support human resource development. We have concluded comprehensive agreements in many regions to promote

efforts to improve civilians' lives in a wide variety of fields, including crime prevention, disaster prevention, health, and sports.

> Signing ceremony for the comprehensive Partnership Agreement with Kami-cho, Miyagi Prefecture

### **Platform**

### Resources

- Driving continuous improvement in the sustainable use of resources
- Supporting the environmental conservation of our country

Renewable energy

### Progress against CSV Goals

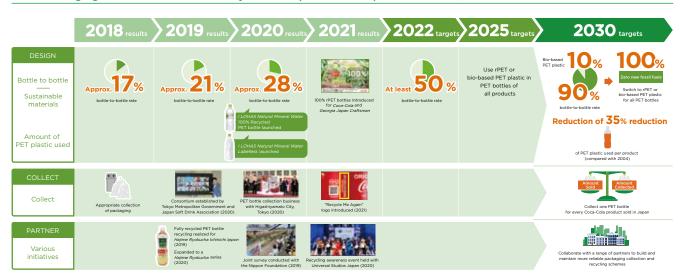

We are making steady progress toward realizing a World Without Waste with the cooperation of the Coca-Cola system in Japan. In addition to implementing business solutions and projects for our bottle-to-bottle resource recycling initiative—in collaboration with local governments, companies, and beverage industry groups—we are making progress beyond our goals for water resource replenishment by entering into new agreements with local communities in our plants' water resource areas, and through ongoing cooperation.

### Initiatives for realizing a World Without Waste

The Coca-Cola system in Japan is promoting initiatives centered on the three elements of design, collect, and partner to realize the global World Without Waste vision advocated by The Coca-Cola Company. Unique packaging targets for the Coca-Cola system in Japan include: the use of sustainable materials, such as recycled PET, in all PET bottles by 2025; recovering a volume of PET bottles equivalent to that of the products sold in Japan by 2030; and the building of stronger packaging collection and recycling schemes in collaboration with partners.

#### 2030 Packaging Vision of the Coca-Cola System in Japan—Roadmap and Results (Updated March 2021)

### Expansion of labelless products

In August 2020, the Coca-Cola system began selling labelless *Ayataka, Sokenbicha*, and *Canada Dry The Tansan Strong* products exclusively through major online shopping channels. By introducing these labelless products that are both environment friendly and easier to recycle, we are responding to the increased consumption rates in homes while contributing to reducing the impact on the environment.

### PET bottle collection business with Higashiyamato City, Tokyo

In October 2020, CCBJI and Higashiyamato City, Tokyo, concluded a comprehensive collaboration agreement for community revitalization and, as part of that agreement, started to work jointly on a PET bottle collection venture. We will promote the bottle-to-bottle initiative to collect and recycle used PET bottles to be turned into new PET

bottles, while collaborating on, for example, the installation of automated PET bottle collection machines across the city.

### Recycling pilot project with Welcia Holdings

In September 2020, CCBJI and Welcia Holdings Co., Ltd. embarked on a pilot project for the purpose of creating a bottle-to-bottle recycling model to turn PET bottles collected at Welcia drugstore locations into raw material

for new PET bottles. For this project, collection boxes have been installed at 11 Welcia drugstores in Oyama City, Tochigi Prefecture. CCBJI is responsible for designing and monitoring the whole sequence of recycling processes, from picking up the sorted PET bottles to turning them into recycled raw material, and CCBJI plans to expand the project area and number of stores after a certain period of implementation.

### Recycling awareness event with Universal Studios Japan™

In September 2020, Universal Studios Japan and its official corporate marketing partners, Coca-Cola (Japan) Co., Ltd. and CCBJI, held a recycling awareness event in the theme park with the cooperation of Osaka City to promote a circular

TM & © 2021 Sesame Workshop TM & © Universal Studios. All rights reserved.

economy for plastic. We created learning opportunities by featuring eco-bags made from PET bottles with original designs, and entertainers performed a show to present the recycling process.

### Collaborative efforts in the beverage industry

We have endorsed the Japan Soft Drink Association's declaration on the recycling of plastic in the beverage industry—announced in 2018—with the goal of achieving

the 100% effective utilization of PET bottles by fiscal 2030, and we are collaborating with our industry peers in initiatives. Part of the bottle-to-bottle Tokyo Project, which was established with the Tokyo Metropolitan Government in 2020, involves conducting trials to, for example, change consumer behavior with regard to sorting recyclables and to prevent anything other than empty bottles from being placed in recycling bins.

Newly designed recycling bin (hole is facing downward)

### TOPICS

### Joint project to recycle PET raw material with Far Eastern New Century (Taiwan)

In July 2020, CCBJI started a joint project with Taiwan's Far Eastern New Century Corporation (FENC), one of the world's largest manufacturers of PET resins and polyester fibers, to commercialize PET bottles that use raw material from chemically recycled\* PET plastic. A portion of the raw material for recycled PET resin used in this project is manufactured by FENC using a new method of

chemical recycling.
After carrying out
pilot sales in CCBJI
business areas, we will
be looking to
commercialize this
PET raw material in
the future.

<sup>\*</sup>The process of recycling by returning used resources to their raw material form through chemical treatment.

### Climate change initiatives

In February of 2021, CCBJI began operation of its Saitama Mega Distribution Center, which is one of the largest automated distribution centers in terms of storage and shipping capacity within the Coca-Cola system in Japan. Logistics operations, such as the sorting that had previously been conducted at sales centers, and inventory storage spaces have been consolidated at the Saitama Mega Distribution Center. We are building a network that achieves

timely end-to-end product deliveries from the production site all the way to business partners and vending machines.

The Shinsei logistics network optimization project is driving the strategic transformation of our logistics as a whole by introducing new distribution centers—primarily mega distribution centers and others such as the Hakushu and Kumamoto warehouses—and reorganizing as well as consolidating hub warehouses and sales centers to streamline complex supply chains. Through these efforts, the CCBJH Group is optimizing its supply chain to resolve a variety of issues, such as reducing their environmental impact.

 Reviewing number of transit Improving efficiency of routes equipment at each of our plants Reducing the number of Working on solving a Developing projects to transportation vehicles variety of issues by improve energy efficiency, Using larger vehicles, streamlining and such as in productivity and improving cargo load ratios, Logistics and simplifying complex yield improvements at all and implementing modal shift Production supply chain networks transportation initiatives Streamlining delivery routes initiatives • Starting in 2019, seven new Reducing the number of production lines have begun vehicles by reviewing our operations, and we are further sales system promoting reduced energy Reducing GHG emissions and fuel consumption by switching to smaller vehicles Introducing sales equipment, such as vending machines, coolers, and dispensers to aid in reducing power consumption and GHG emissions Note: Akashi Mega Distribution Center is scheduled for Expanding the use of peak shift vending completion at the end of 2022 machines that reduce daytime power consumption by up to 95% by shifting Sales the electricity used for cooling to initiatives nighttime and not utilizing power during

### Hakushu Plant's utilization of Furusato Hydropower Plan renewable energy

Since 2019 and the conclusion of a contract for the Furusato Hydropower Plan offered by Yamanashi Power

Plus—a power supply brand jointly operated by Yamanashi Prefecture and TEPCO Energy Partner, Incorporated—our Hakushu Plant has been utilizing hydroelectric power. Through this initiative, we are working to reduce environmental impact by eliminating CO<sub>2</sub> emissions associated with electricity use.

the day

### Initiatives for improvements in the Supply Chain Management (SCM) Division

To nurture employees and produce results, we have put in place an organizational excellence (OE) certification system at SCM headquarters to engage in problem-solving by ranking problems in four stages from small improvements in the workplace to management issues according to the scale of improvement. It has become standard practice for employees to submit I-cards (improvement proposals) for issues they notice during their work and improvement ideas. Last year, 99% of SCM employees submitted one or more I-cards a month. Exceptional I-card proposals are rewarded quarterly and shared with other plants and departments to further enhance the effectiveness of the improvements. In 2020, the I-card Excellence Award in the environment category was won by Takatoshi Aonuma from the Tosu Plant for his proposal to reduce gas consumption by reviewing boiler operations, which assists in terms of both the environment and cost.

Takatoshi Aonuma (now at the Kiyama Plant)

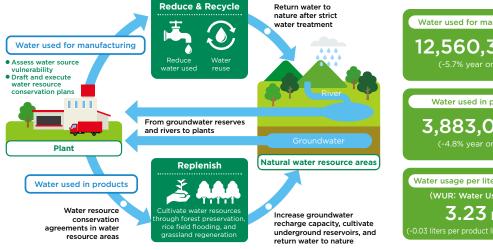

### CCBJI's initiatives regarding water

The Coca-Cola system in Japan considers issues related to water a priority topic to be addressed in its Sustainability Framework. The CCBJH Group is promoting various initiatives with the aim of achieving its own non-financial CSV Goals, which include a 30% reduction in water usage by 2030 (compared to 2015) and maintaining a water source replenishment rate of 200% by 2025.

At our plants, we are working to reduce the amount of

water used and to reuse the water we do use by installing production lines equipped with the latest technology, and by improving the manufacturing processes and plant equipment by monitoring them on a daily basis. With the target of returning to nature a volume of water equivalent to the amount used for manufacturing products at our plants, we have also entered into agreements with local communities and organizations. Alongside members of local communities, we are promoting activities to enhance water source replenishment, which is the ability for the watershed areas supplying groundwater to our local manufacturing facilities to sustainably cultivate and store water.

### Entering into agreements for the purpose of water conservation in plants' water resource areas

#### Hakushu Plant

### Agreement with Yamanashi Prefecture

Based on a collaboration agreement for the cultivation of water resources, which was concluded in July 2020, CCBJI and Yamanashi Prefecture have commenced collaboration in a variety of activities related to cultivation and effective utilization of water and forest resources. These activities primarily involve promoting water resource cultivation (the conservation of an environmentally sound water cycle) and the provision of information in Yamanashi Prefecture. We are also working to support forest management in 282

hectares of prefectural forest land along the watersheds of the Nagare and Kakubosawa rivers originating on Mt. Amagoi, which makes up the water resource area for CCBJI's Hakushu Plant.

### Saitama and Iwatsuki plants

### Renewal of agreement with Nippon Paper Industries

In December 2020, CCBJI, Nippon Paper Industries Co., Ltd., and Marunuma Kogen Resort Co., Ltd. renewed their three-party agreement with respect to collaborating on forest management for the purpose of water resource replenishment. CCBJI supports the necessary management work, such as tree thinning and road maintenance, in the area (1,746 hectares) in order to maintain the environment of the Saitama and Iwatsuki plants' water resource area. We are also collaborating on activities geared toward promoting forest management and preservation, as well as

strengthening collaboration with the other parties by exchanging necessary advice and information.

# CCBJH Group's CO<sub>2</sub> Emissions Results and Accounting Methods

We consider the mitigation of climate change a crucial issue to address throughout the course of our business activities. As such, we transparently disclose corporate greenhouse gas emissions, of which  $CO_2$  is a primary example, and share information with our many stakeholders about the overall state of greenhouse gas emissions, potential countermeasures, and other topics in the hope that this will lead to further emissions reduction.

Source: "Supply-chain emissions in Japan," Ministry of the Environment, 2015 www.env.go.jp/earth/ondanka/supply\_chain/gvc/en/files/supply\_chain\_en.pdf

<sup>\*1</sup> The CCBJH Group uses the Coca-Cola system's global thermal conversion factors in accounting.
\*2 In regard to calculating the electricity use and associated greenhouse gas emissions of office activity, 26 out of CCBJI's total 406 business locations were excluded from the scope of this year's calculations. This was due to reasons such as being unable to obtain an accurate measurement of electricity use at leased office locations.
\*3 Energy use and greenhouse gas (CO<sub>2</sub>) emissions for plant-associated facilities were accounted for in the manufacturing category in the previous year, but from this year they are accounted for in the offices category. Energy use for plant-associated facilities was 178,577 GJ, while greenhouse gas (CO<sub>2</sub>) emissions amounted to 8.5 thousand t-CO<sub>2</sub>.

Third-party
assurance report
and accounting
process

#### Independent Assurance Report

To the Representative Director and President of Coca-Cola Bottlers Japan Holdings Inc.

We were engaged by Coca-Cola Bottlers Japan Holdings Inc. (the "Company") to undertake a limited assurance engagement of the environmental performance indicators marked with ★ (the "Indicators") for the period from January 1, 2020 to December 31, 2020 included in its CSV Report 2021 (the "CSV Report") for the fiscal year ended December 31, 2020.

#### The Company's Responsibility

The Company is responsible for the preparation of the Indicators in accordance with its own reporting criteria (the "Company's reporting criteria"), as described in the CSV Report.

### Our Responsibility

Our responsibility is to express a limited assurance conclusion on the Indicators based on the procedures we have performed. We conducted our engagement in accordance with the 'International Standard on Assurance Engagements (ISAE) 3000, Assurance Engagements other than Audits or Reviews of Historical Financial Information' and the 'ISAE 3410, Assurance Engagements on Greenhouse Gas Statements' issued by the International Auditing and Assurance Standards Board. The limited assurance engagement consisted of making inquiries, primarily of persons responsible for the preparation of information presented in the CSV Report, and applying analytical and other procedures, and the procedures performed vary in nature from, and are less in extent than for, a reasonable assurance engagement. The level of assurance provided is thus not as high as that provided by a reasonable assurance engagement. Our assurance procedures included:

- Interviewing the Company's responsible personnel to obtain an understanding of its policy for preparing the CSV Report and reviewing the Company's responsible personnel to obtain an understanding of its policy for preparing the CSV Report and
- Inquiring about the design of the systems and methods used to collect and process the Indicators.
- Performing analytical procedures on the Indicators.
- Examining, on a test basis, evidence supporting the generation, aggregation and reporting of the Indicators in conformity with the Company's reporting criteria, and recalculating the Indicators.
- Making inquiries and reviewing materials including documented evidence of the Company's Ibanaki Plant selected on the basis of a risk analysis, as alternative procedures to a site visit.
- Evaluating the overall presentation of the Indicators.

#### Conclusion

Based on the procedures performed, as described above, nothing has come to our attention that causes us to believe that the Indicators in the CSV Report are not prepared, in all material respects, in accordance with the Company's reporting criteria as described in the CSV Report.

#### Our Independence and Quality Control

We have complied with the Code of Ethics for Professional Accountants issued by the International Ethics Standards Board for Accountants, which includes independence and other requirements founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional behavior. In accordance with International Standard on Quality Control I, we maintain a competensive system of quality control including documented policies and procedures regarding compliance with ethical requirements, professional standards and applicable legal and regulatory requirements.

#### Accounting process

	Calculation scope	Accounting method
Manufacturing	All bottling plants of the CCBJI Group (17 plants) and associated equipment within plant premises, as well as Q'SAI Group's Fukuoka Konominato Plant and Q'SAI Farm Shimane	Total energy use (GJ) = total of (energy use for each energy type × thermal conversion factor*) Greenhouse gas (CO <sub>2</sub> ) emissions (thousand t-CO <sub>2</sub> ) = total of (energy use for each energy type × CO <sub>2</sub> emissions factor*)
Logistics	The CCBJI Group's business logistics, including distribution from all CCBJI Group plants (17 plants) to the market (customer retail outlets, vending machines, etc.) and the Q'SAI Group's business logistics, including distribution from the abovementioned plant and farm to the market (customer retail outlets, vending machines, etc.). Also includes third-party (outsourced) transportation.	<ul> <li>Total energy use (GJ) = total of (energy use for each energy type × thermal conversion factor*)</li> <li>Greenhouse gas (CO<sub>2</sub>) emissions (thousand t-CO<sub>2</sub>) = total of (energy use for each energy type × CO<sub>2</sub> emissions factor*)</li> </ul>
Offices	Buildings operated by the CCBJH Group (head office, sales centers, distribution centers, and plant-associated facilities, etc.)	Total energy use (GJ) = total of (energy use for each energy type × thermal conversion factor*) Greenhouse gas (CO <sub>2</sub> ) emissions (thousand t-CO <sub>2</sub> ) = total of (energy use for each energy type × CO <sub>2</sub> emissions factor*)
Sales	Vending machines in operation within CCBJI's sales area	Total energy use (GJ) = annual vending machine electricity use × thermal conversion factor* Greenhouse gas (CO <sub>2</sub> ) emissions (thousand t-CO <sub>2</sub> ) = annual vending machine electricity use × CO <sub>2</sub> emission factor*

<sup>\*</sup>Sources for thermal conversion factors and CO<sub>2</sub> emissions factors

For fuel sources other than electricity, the CCBJH Group uses a thermal conversion factor and a CO<sub>2</sub> emissions factor from the Greenhouse Gas Emissions Accounting and Reporting Manual Version 4.7 (Ministry of Environment and Ministry of Economy, Trade and Industry; January 2021).

For electricity, the thermal conversion factor is 9.97 MJ/kWh for daytime electricity, as stipulated in Enforcement Regulations for the Law Concerning Rational Use of Energy (revised March 31, 2020), and the adjusted CO<sub>2</sub> emissions factor is 0.470 kg-CO<sub>2</sub>/kWh, from Emissions Factors by Electricity Provider (Greenhouse Gas Emissions Accounting for Specified Organizations) – Results for Fiscal 2019; (Jan. 7, 2021; Ministry of Environment and Ministry of Economy, Trade and Industry).

Note: All shares of Q'SAI CO., LTD were divested on February 1, 2021, but Q'SAI CO., LTD and Q'SAI Group companies' results are still included in the 2020 CO<sub>2</sub> emissions and primary environmental data tables.
