

January 31, 2022

To all,

Coca-Cola Bottlers Japan Inc.

We have endorsed the Ministry of the Environment's "Leading Tenant Action Plan"

Coca-Cola Bottlers Japan Inc. (Headquarters in Minato-ku, Tokyo; Representative Director & President Calin Dragan) has endorsed the Leading Tenant Action Plan, a list of decarbonization initiatives by tenant companies compiled by the Ministry of the Environment.

The Leading Tenant Action Plan is designed to promote the reduction of CO2 emissions from office buildings, which account for a high percentage of greenhouse gas emissions (GHG) in Japan, and compiles initiatives that building tenants have started to achieve decarbonization, such as shifting to ZEB\*. In the future, we will promote initiatives to decarbonize our workplace, such as by conserving energy and utilizing renewable energy, in cooperation with building owners and in line with this Action Plan.

Our company is committed to reducing GHG emissions in each of our business areas in order to achieve the Coca-Cola System in Japan's GHG emissions reduction target for 2030.

\*ZEB is an abbreviation of "Net Zero Energy Building". This refers to buildings that aim to reduce the annual revenue and expenses related to their primary energy consumption to zero, while also providing a comfortable indoor environment.
